

Lawn Maintenance Programme

February – April

Apply Prestige Lawnsand No1 (powder) @ 70g/m². This Nitrogen and Iron fertiliser helps to control moss and acts as a spring, start up tonic fertiliser.

Apply on a dry day. 24- 48 hours of dry weather after application required.

7-14 days after above

Scarify the lawn in 2-3 directions and remove debris.

April – May

Apply Prestige 12:0:9 Fine Turf Traditional (granule) @ 35g/m². A spring / summer fertilizer with Nitrogen and Potash. This fertilizer will feed for approx. 6 weeks.

OR

Prestige NK spring & summer 15:0:12 (liquid). A Nitrogen and Potash feed with the added benefit of iron for a quick green up. Apply as and when required, will feed for approx 4 weeks.

7-14 days after above

Apply Scotts Verdone Extra Selective weedkiller as per manufacturer instructions.
(Always read the label use pesticides safely.)

June – July

Apply Prestige 14:2:6 Fine Turf Longevity, slow release fertiliser at 35g/m². This Nitrogen, phosphate and potash fertilizer is slow release and will feed for approx. 8 weeks.

OR

Prestige NK spring & summer 15:0:12 (liquid). A Nitrogen and Potash feed with the added benefit of iron for a quick green up. Apply as and when required, will feed for approx 4 weeks.

September – October

Ideally lightly scarify and over seed and weak or bare areas.

Apply Prestige 6:6:12 Fine Turf All Season Autumn fertiliser @ 35g/m². An excellent autumn winter fertilizer. This product can be applied every 6-8 weeks during the winter if required and subject to weather conditions allowing.

OR

Prestige NK autumn & winter 5:0:12 (liquid). A low Nitrogen and high Potash feed with the added benefit of 5% iron for a quick green up. Apply as and when required, will feed for approx 4 weeks.

Notes

Aeration during the winter months will aid drainage and root growth.

As with all of our recommendations the application dates are approx. and as such are subject to the weather conditions that prevail at the time.
